Cornerstone OnDemand, Inc
Mumbai, Maharashtra,, India

Dear Sir / Madam,

I am very eager to apply for the Junior Software Engineer position at Cornerstone. This particular position fully encapsulates everything I aspired to achieve. I am a final year undergraduate student, pursuing a major in Mechanical Engineering at National Institute of Technology, Andhra Pradesh, India. I have a sound academic background with a cumulative GPA of 7.56 on a scale of 10. I am passionate about programming and application development. I am proficient in Java, JavaScript and have experience working with MERN Stack.

With a solid foundation in the basics of Programming and Data Structure, I am more than prepared to put my knowledge and ability to work for you. In my academics, I have created relevant projects involving MERN Stack like React Sticky Notes Web App, User authentication REST API with JWT etc. I am also experienced in REST API development using backend technologies like Node js and Express js. You can also visit my github profile to see similar repositories I have created.

Thank you for your thoughts and time. I'm excited to learn more about the Junior Software Engineer role at Cornerstone. I hope I have clarified my interest in software development, and I want to be given the opportunity to demonstrate to the team personally what a valuable contribution I can be. I'm looking forward to hearing from you.

Sincerely,

Arshad Khan
